WELCOME to the **May 2010 Construction Monthly Update** for **Vine**.

Construction Update

What a contrast in weather conditions from last month!!

The Builder's, PBS, have been working hard during the month of May as they battle against the rain and wet weather. The main activity for May has been dewatering and stabilizing the work areas in readiness for fine weather.

The early part of the month saw most of the detail excavation and pile trimming completed and reinforced concrete pile cap footings poured in readiness for the pouring of the concrete floor slabs. In order to overcome the rain, the builder will start construction of the first suspended carpark level and then return later to pour the concrete at the lowest level

A milestone event was achieved in May with the erection of the site tower crane, which now enables PBS to handle and move materials around the site more efficiently.

For those of you who wondered how the Builders erect the tower cranes, here's a DIY Step by Step Guide on how it's done.

Site preparation prior to Crane Tower erection

Discovery Point Development Team
